

*Goal: Overcome human diseases by developing 'novel' inhibitors and imaging probes with 'right' targets*

1. Developed novel chemical probes for Kinase and TCS (with Dr. Eranthie at BU)
2. Developed new chemical warheads for Lysine and Histidine reactivity (with Dr. Monika at Emory)
3. Developed new photoacoustic imaging probe for cancer detection (with Dr. Wang at UMICH)
4. Discovered novel E3 ligase recruiter for PROTAC (with Dr. Nomura at UC Berkeley)
5. Collaborate with Biotech company (Uppthera, Bridgebio, and Voronoi)
